

Hi,

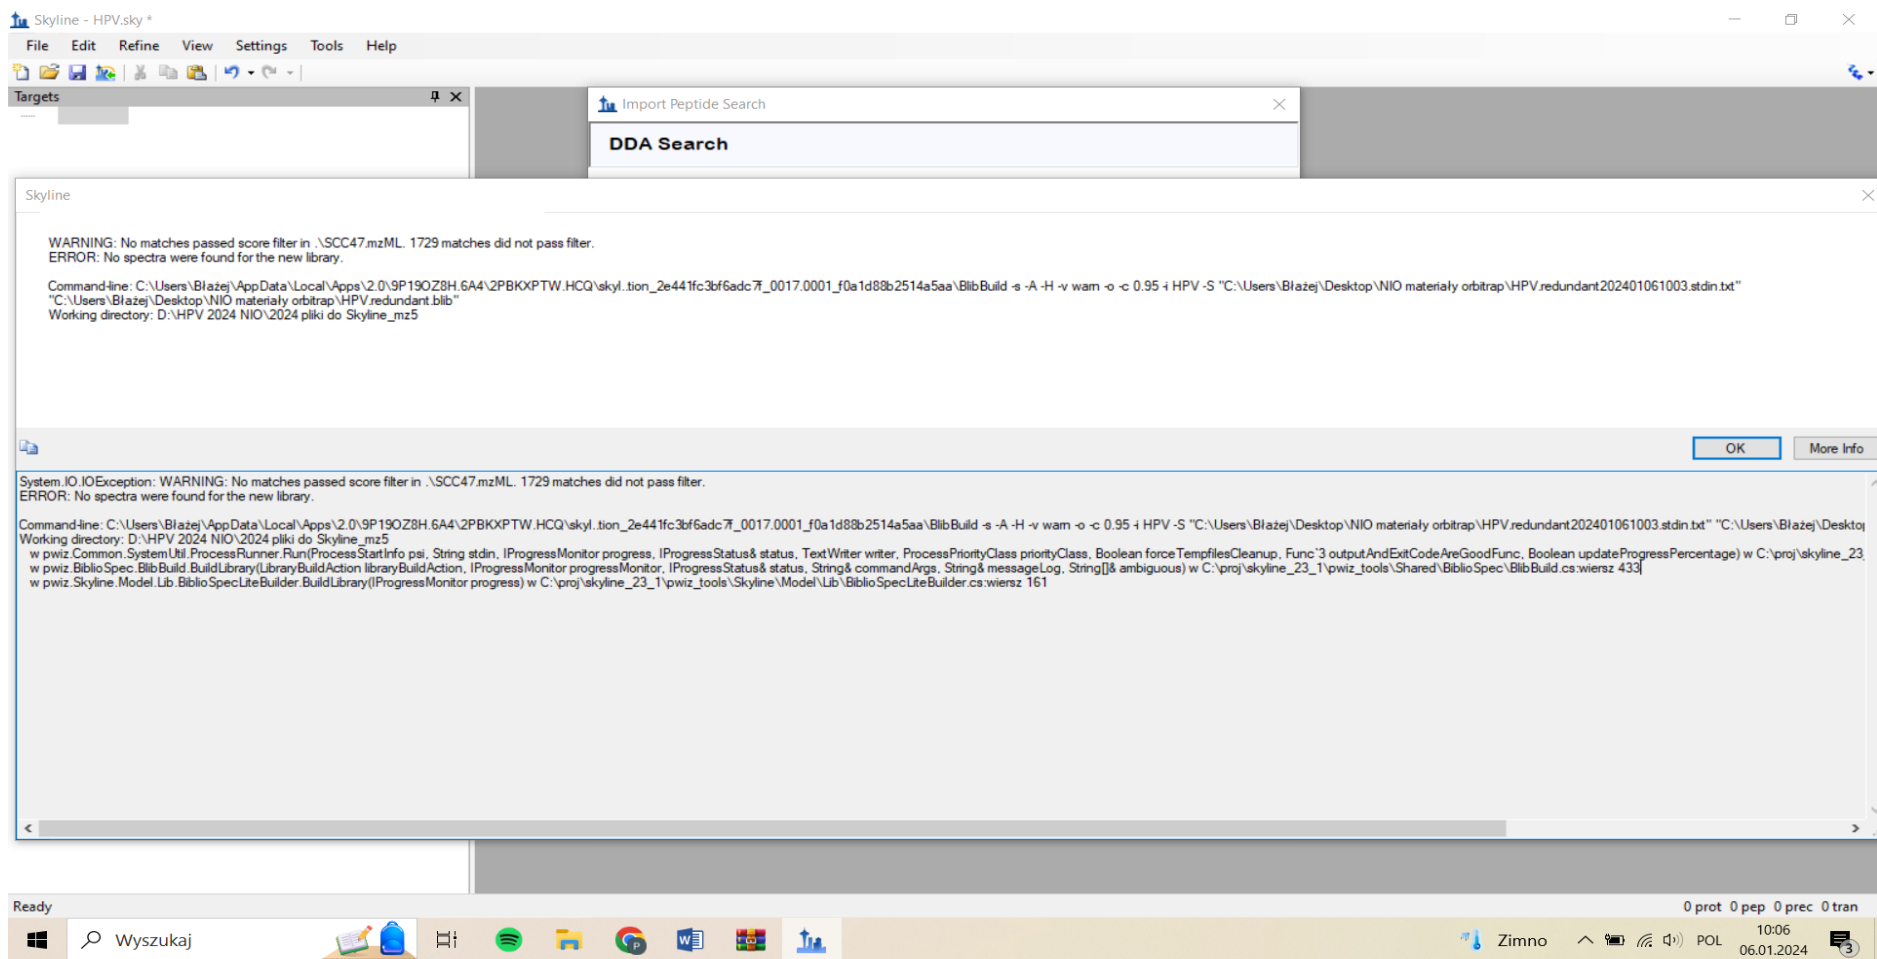

I wanted to make IMPORT DDA PEPTIDE SEARCH. I made everything correctly with tutorial (files .mz5 and FASTA downloaded from SkyLine) and I created results.. But when I wanted to process my own data and I stocked. Every time I got error information with description below.

It is definitely some problems with my own .raw files.

I changed files from raw. to mz5- no success (exclude error in .raw or .mz5)

I changes fasta file for a new one from uniprot- no success (exclude error in FASTA)

I have no idea what is wrong.
